

Quick-MD[®]

"A Professional Practice Management System"

Quick-MD Scanner Package

Are you ready to save time and money? Quick-MD now makes it easier than ever to manage your patient's information and reduce paper work. We are offering three new features to help you accomplish this task:

1. You are now able to attach insurance cards and driver's licenses using a business card scanner.

2. Flatbed scanners can be used to attach any hard copy documents under the EMR section of Quick-MD.

3. Web Cameras can be used to photograph and automatically store pictures of your patients.

All three features are easily accessible from the patient's demographics screen.

Card Scanner

By using the BizCard 600C scanner you may scan and attach insurance cards from the primary, secondary and tertiary insurance screens. It is as simple as clicking on the "scan/view" button on the screen. The 600c scanner allows you to scan the front of the card or front and back if both sides are needed. www.bizzcardreader.com, 1800-274-2165.

The driver's licenses field in the patient's demographics screen is now yellow. By pressing the F1 key while your cursor is in this field, you will be able to view or scan in a copy of the patient's drivers license.

These features will greatly reduce the amount of time spent chasing charts! The insurance subscriber information will be right at your fingertips on the screen in front of you. It doesn't get any easier than this!
